Germany*

Natural latex milk with curing and colouring agents.

Aluminate hardening agent

Rubber granulate certified in accordance with the EU1907-2006 REACH regulation.

A delivery of raw materials

LIQUID RUBBER protects your horse!

"Liquid Rubber" rubber screed flooring is a hygienic and safe choice for all types of animal. Surfaces are completely sealed, urine and water will not soak through and it prevents the growth of bacteria and unpleasant smells. All areas become very easy to clean, which gives you more time to devote to your animal. Anti-wear matting can also be securely integrated into areas where horses are washed and groomed. This matting is extremely durable and slip-resistant.

The material is predominantly made from natural products. The base surface should either be made of concrete, wood, block paving or metal. The liquid rubber compound is particularly easy to apply with a trowel and can be precisely distributed across the flooring surface. The flooring must be cleaned with a pH neutral and solvent-free cleaning agent. Specific requirements must be met when laying the flooring on an aluminium base. You can refer to these guidelines and the technical data sheet in the "Products" section on our website.

Additional benefits of Liquid Rubber:

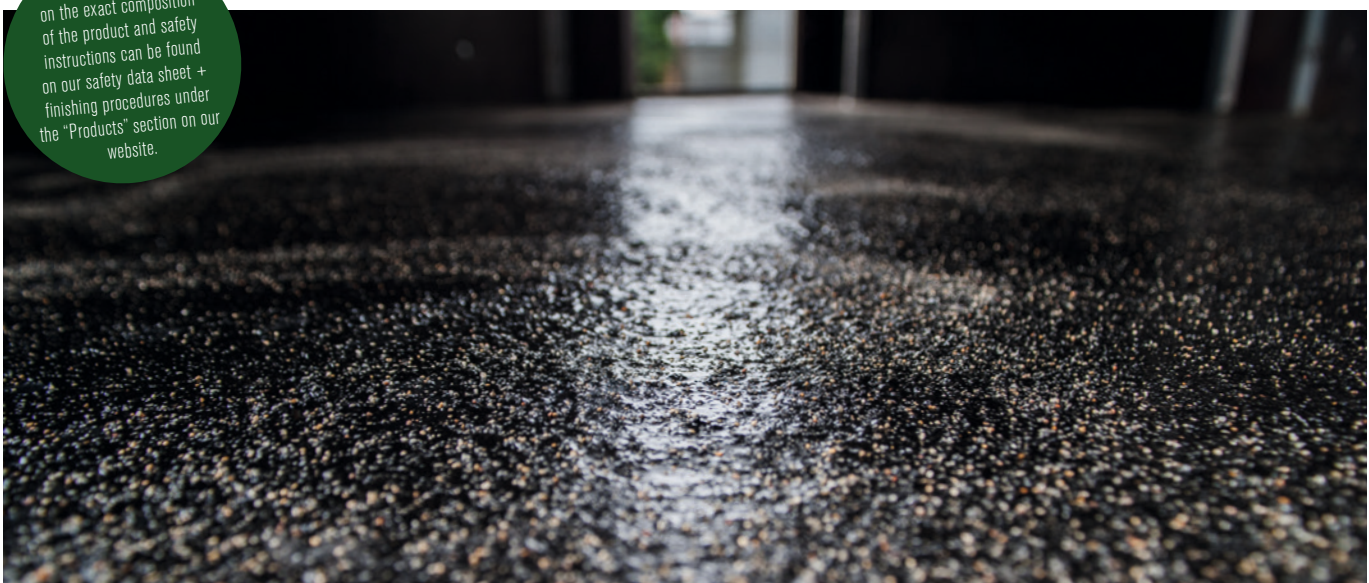

- **Installation:** no cutting, no wastage from cutting, a complete and continuous surface finish.
- **Flooring:** hygienic, convenient, anti-slip, elastic, animal friendly, safe and reduces noise levels. The latex layer provides exceptional stability and is made predominantly from natural products
- **Dimensions:** A flexible flooring solution. An endless variety of possibilities for your animal flooring needs.
- **Locations:** Stables, veterinary clinics, trailers, stud farms etc.

Our rubber screed flooring offers the following technical features:

- Liquid application
- The material is waterproof and urine resistant
- The material can be fitted with an anti-wear mat, which is extremely durable and has anti-slip properties
- It can be laid in areas with underfloor heating
- Repairable
- Plasticiser tested and certified in accordance with PAH regulations: approved for children's play areas and sports facilities

Further info

on the exact composition of the product and safety instructions can be found on our safety data sheet + finishing procedures under the "Products" section on our website.

Finca in Majorca

Horse Protect Liquid Rubber produces outstanding flooring for equestrian facilities and is both hygienic and extremely practical. Surfaces are completely sealed, urine and water will not soak through and it prevents the growth of bacteria and unpleasant smells. Anti-wear matting can also be securely integrated into areas where horses are washed and groomed. This matting is extremely durable and slip-resistant.

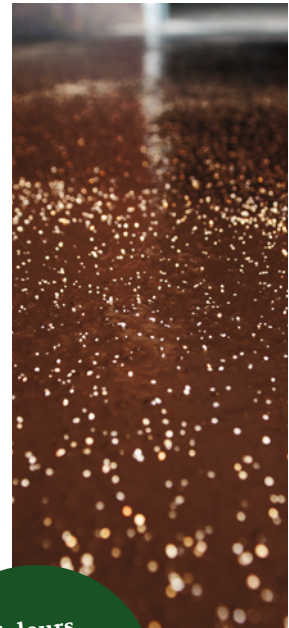

Lüsche veterinary clinic

Treatment rooms in veterinary clinics require flooring that is safe, quiet, slip resistant and hygienic. We have been successfully supplying the veterinary sector for 25 years. Our customer testimonials for **Horse Protect Liquid Rubber** are excellent.

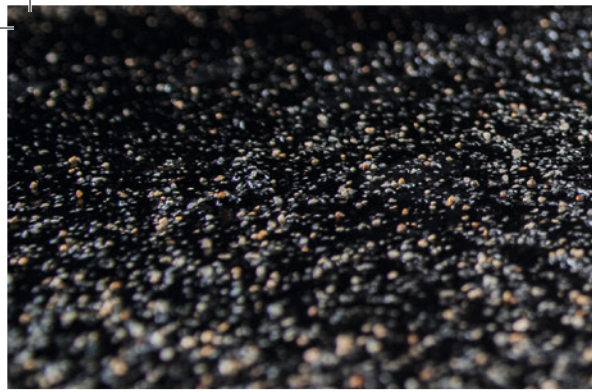

Animal transporter

Horse Protect Liquid Rubber is extremely animal friendly and elastic. Modern animal transporters (horse and cattle) fitted out with our rubber flooring. **Horse Protect Liquid Rubber** also prevents foundations from rotting as it is completely watertight.
